EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Scott Ashton on December 14, 2007. The application has been amended as follows:

In the specification, at page 1, first paragraph:

This application is a divisional application of US Patent Application No. 09/773,605, filed February 2, 2001, now US Patent No. 7,258,845, which is a continuation of PCT application JP00/04911, filed July 21, 2000, and which claims priority from Japanese Patent Application Nos. JP11-223548, filed August 6, 1999; and JP11-338882, filed November 30, 1999; the entire disclosures of the above are hereby incorporated herein by reference.

REASONS FOR ALLOWANCE

The following is the Examiner's statement of reasons for allowance:

The claims are deemed to be directed to a non-obvious improvement over the reactor for generating moisture as disclosed in EP 0 922 667 to Ohmi et al. Although the EP publication suggests the provision of a heater and cooling unit to the reactor, the prior art does not disclose or adequately suggest the provision of the specifically claimed heater and cooling unit to the reactor. In particular, the prior art fails to disclose or adequately suggest a reactor for generating

Art Unit: 1797

moisture, wherein,

the reactor further comprises fin base plates attached to both the outside walls of the first reactor structural component and the second reactor structural component, said fin base plates being provided with a plurality of fins, a through hole for the corresponding material gas supply joint or moisture gas take-out joint, and a cut/notch of smaller width than the diameter of the through hole; and

the outside wall of the second reactor structural component further comprises a heater, wherein the heater is disposed on the outside wall of the second reactor structural component, a heater pressing plate presses on the outside of the heater, and said fin base plate is attached to the outside of the heater pressing plate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
